

Huawei Developer (Enterprise) Application

Thank you for your interest in joining the Huawei Developer Program for Enterprises. Please ensure **all sections are completed thoroughly**. Please be aware that you may be contacted for additional information if necessary.

If you have any questions or need assistance, please contact us at hihealth@huawei.com.

1. Data Usage

Outline the data you are applying for on the Health Service Kit platform and describe the corresponding usage scenarios.

Permissions	Data Usage Instructions			Remarks
Read step count data. Read calories burned (active energy) data. Read distance data. Historical data: one month (read-only). No write permissions.	Data usage scenarios and requirements After the user connects Huawei Health from the Wearables screen and authorises access, the app reads daily totals of steps, active calories and distance and shows them in the user's own dashboard: activity rings on the Today screen and 14-day / 1-month trends in My Data. Classified by day. On first connection, up to the previous month is read so the charts are not empty.	Data usage purpose Help users understand their daily activity next to their blood test results and track a personalised activity goal (e.g. 8,000 steps/day) that is part of their preventive-health plan. Data is never sold or used for advertising.	Development completion time 2026.11.30	Screenshots of the app simulation (if any)  Image : JPG ; PNG

1. If the usage scenario of the data read/write permission you applied for changes during the development process, please update the application materials list (data usage scenario of sheet 1) before applying for verification;
2. The application for year-long historical data requires detailed usage scenarios;
3. The materials list is divided into 4 sheets, please fill in and upload;
4. Special data permission instructions:
 - a. Data synchronization: only supports iOS and Android mobile applications;
 - b. Year-long historical data: Year-long historical data is sensitive, and detailed usage scenarios and application reasons are required;
 - c. Device information: The scenarios involved mainly include hardware devices connected to sports health apps or purchasing industry customized equipment.
 - d. The two permissions of real-time heart rate and real-time exercise recording are only supported in the open extension capabilities on the end side, and only support Android applications.

Examples:

Permissions: Read heart rate data, read medium and high intensity data, and write body fat data.

Data usage scenarios and requirements: Show the user the heart rate statistics and medium and high intensity data interface to help the user understand the body data;

After the user turns on data synchronization, each time the body fat data is measured using a body fat scale, it will be uploaded to the Huawei Health App in real time; **Classify by day, week, month, and year**

Data usage purpose: Heart rate reading, medium and high intensity reading, and body fat writing permissions, based on the various monitoring data and data writing generated by the device, form a visual curve chart for the day, week, month, and year, which is convenient for corporate employees to track changes in their physical condition.

Development completion time - Example: 2020.10.30.

Image : JPG ; PNG

HomeTest app (Android), Today screen, demo with sample data. Steps and active calories feed the daily activity rings; distance completes the activity summary. Only steps, calories and distance are requested from Huawei Health (read-only). Sleep and heart-rate values in the mock-up come from other sources (e.g. Android Health Connect); they are not requested in this application.

2. Company Description

Provide a self-check and fill in the qualifications of your enterprise, including business and legal information for credit status review.

2.1. Company business stability

The applicant's entity must have been in existence and established for more than 1 year.

2.1.1 Has the company legally existed for more than 1 year?

Yes ☐
No ☒

Remark: Individual developer; the company that will operate HomeTest is being incorporated in Spain.

Note: The business cannot have had major changes within one year: 1. Business scope; 2. Senior management; 3. Company name

2.1.2 What is the registered paid-up capital of your company?

Spain (EU)

Not applicable (individual developer). Basic data only.

Note: Fill in the country/region where your company is registered.

Note: Specify the amount in order to qualify for access to data scopes.
EU: no less than €25,000;
Japan: No less than 10 million Yen (basic) / 20 million Yen (advanced);
Other countries/regions: No less than 500,000 CNY(basic) / 5 million CNY(advanced).

2.1.3 Brief text introduction of the company.

HomeTest is an early-stage preventive-health project based in Madrid, Spain. It combines at-home blood tests, a mobile app to understand the results, and access to independent healthcare professionals (doctors, dietitians, trainers). Applicant: individual developer Astor García Amor (Huawei ID hid83017893, developer ID 30034000030345789). Company being incorporated in Spain.

Note: Business scope and main services of the company needs to be explained.

2.2 Corporate information

Company name:

Not applicable – individual developer (Astor García Amor)

Business type:

Individual developer

Legal representative:

Astor García Amor

Business scope:

Preventive-health app: at-home blood tests, results and wellbeing plan

Business license (optional):

Not applicable

Brief image introduction of the company(Business Scope)

Note: If you have filled in 2.1.3, you don't need to provide the image introduction.

Image that best represents the company's business scope such as the company overview slide, an industry breakdown, a core services info-graphic, an organizational chart, or any other relevant visual that showcases the company's activities.

Image format : JPG ; PNG

HomeTest — preventive health, from home

Madrid, Spain · individual developer (company being incorporated)

1. At-home blood test

Kit at home or lab
appointment; sample
analysed by a partner lab.

2. HomeTest app

Results explained,
trends, wellbeing plan.
Wearables: steps,
calories, distance.

3. Professionals

Doctors, dietitians and
trainers the user chooses;
sharing only with explicit,
revocable consent.

Data stored in the EU (Frankfurt) · never sold or used for advertising

Wellbeing information only: HomeTest does not diagnose or treat

3. Project Details

1. Application (app) introduction

HomeTest is a preventive-health membership app. Users record and understand their blood test results, home measurements, wellbeing check-ins and daily activity from their wearables. It shows trends and informational wellbeing recommendations (it does not diagnose) and lets users share selected data with the professionals they choose. Huawei Health data (steps, calories, distance) is shown only in the user's own dashboard.

Example: XX platform is an enterprise tracking management information platform, which realizes enterprise health management by innovating the "tracking management" model. The platform is mainly used by XX, mainly to realize the lifestyle tracking management of XX's health habits.

2. Application industry

Health and fitness / preventive healthcare (consumer)

The industry to
which the app
belongs

3. Project leader for Huawei-side connection (optional)

Astor García Amor (developer)

4. Cooperation details (optional)

Read-only integration of basic data via REST API

5. Do you have any purchasing needs?

No

4. Technical Self-test

Self-test Module	Self-check Content	Self-test Result	Remark
Open technical integration	Countries this app serves <i>Example: Mainland China</i>	Spain (European Union)	
	Commercial release or Demo <i>Example: Commercial Release</i>	Demo	Fill in the self-check result: Commercial Release or Demo
	Select all the application types you want to access the Health Service Kit <i>Examples: Android mobile apps, iOS mobile apps, WeChat mini-programs, HarmonyOS apps</i>	Android mobile app	Supported application types: 1. Mobile applications: Android mobile applications (Huawei and third-party Android), iOS mobile applications, mobile phone Hongmeng applications (HarmonyOS), watch Hongmeng applications (HarmonyOS) 2. Web applications: WeChat applets, H5, etc.
	Access method selection (multiple selections possible): REST API: supports access to all the above ecological applications Android JAVA API: supports Android mobile applications (Huawei, third-party Android) HarmonyOS ArkTS API: supports mobile Hongmeng applications (HarmonyOS), supports watch Hongmeng applications (HarmonyOS)	<i>Example: REST API</i> REST API (cloud-side, OAuth 2.0 with Huawei ID; tokens stored server-side)	1. If your application type involves cross-platform, such as supporting iOS, WeChat applets, etc., it is recommended to choose REST API access; 2. If it is a Hongmeng application (HarmonyOS), it is recommended to choose HarmonyOS ArkTS API; 3. For the actual access method selection of REST API and Android JAVA API, please refer to: https://developer.huawei.com/consumer/en/doc/HMSCore-Guides/application_description-0000001418052318#section093628104515 4. For the actual access method selection of HarmonyOS ArkTS API, please refer to: https://developer.huawei.com/consumer/en/doc/harmonyos-guides-V5/health-service-kit-ability-V5
	Whether the data permissions applied for can meet the needs <i>Example: Y</i>	Y	If the currently applied data permissions do not meet your needs, you can submit a work order to contact us to increase the data permissions you expect. https://developer.huawei.com/consumer/en/support/feedback
	Whether the data usage scenarios and requirements of the application involve medical treatment <i>Example: N</i>	N (wellbeing information, no diagnosis or treatment)	
	Expected authorized user scale and interface request TPS <i>Example: 1 million users, TPS 3~4K</i>	Pilot: < 1,000 users in the first year; TPS < 1
